

THE PLASTIC SOUP

- Every minute one garbage truck full of plastic goes into the ocean
- Plastic never decomposes, it just breaks down into smaller and smaller pieces (microplastics and nanoplastics)
- Animals can get caught in plastic or eat it by mistake
- Humans consume plastic by eating fish

RECYCLE

- Preventing single-use plastic is the best thing, but reusing is also an option
- After shredding, heating and casting, it can be turned into new products
- It's often cheaper for companies to use new plastic
- Recycled plastic is not always strong enough for all products

PREVENTION

- Using disposable plastic is often unnecessary
- 1 million plastic water bottles are sold every minute
- You can easily replace single-use plastic bottles with reusable bottles
- There are plenty of alternatives for other plastic products too

INSPIRATION AND MOTIVATION

- You can motivate people to use less plastic
- Stop using single-use water bottles at home and at school
- Think up some fun alternatives or activities!
- Art can help to make people aware
